

ABSTRACT OF THE DISCLOSURE

The present invention relates to a heel and sole assembly. A conventional transparent heel often attaches to the sole through adhesive or screws. The heel tends to separate from the sole when using adhesive, while a screw in a transparent heel is not beautiful and the sole will be uneven. The present invention is to obviate the above disadvantages. It comprises a heel, a sole and a connecting sheet. A locating hole is formed on the sole, while a lower surface of the connecting sheet is provided with an engaging column, the engaging column traveling through the locating hole of the sole and then inserting in the locating groove of the heel. Thus, the disadvantages of conventional heel and sole assemblies are obviated.
